LIGHTING

TORUS

A vision came true

PEOPLE LIGHT OUR WAY

TORUS

Unique shape,
versatile application

TORUS is the realization of a vision of **Ilg Santer Architects** and **Licht Kunst Licht**. A particularly elegant and refined luminaire that fits countless architectural styles thanks to its organic, ring-shaped design.

TORUS elegantly combines direct and indirect lighting components. It thus not only enables room-radiating, indirect light with simultaneous accentuation, but also offers numerous design possibilities for impressive lighting atmospheres.

Flexible mounting option

The TORUS ceiling luminaire is available as a surface-mounted ceiling luminaire and as a pendant luminaire.

The pendant version is available as a tubular or cable pendant luminaire with a pendant length of up to three meters.

Lighting mood of your choice

By individually controlling the downlight and the aura, the same luminaire makes the room appear completely different.

Wireless control

TORUS is available as DALI version or with MyLights Remote Casambi control.
